DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ghoneim et al. (5,025,882).

Ghoneim et al. discloses a method of controlling traction in a vehicle having at least one non-driven wheel speed sensor, the method comprising detecting at least one of actual vehicle acceleration and a wheel speed difference, comparing said at least one of a actual vehicle acceleration and said wheel speed difference to at least one of a predetermined vehicle acceleration and a predetermined wheel speed difference to detect vehicle wheel slip, and reducing wheel torque in response to said detected wheel slip (Column 1 lines 45-68 and Column 2 lines 25-41); wherein the comparing step further includes detecting a wheel speed acceleration and comparing the wheel speed acceleration to a predetermined wheel speed acceleration to detect wheel slip (Column 3 lines 10-15); further comprising comparing a non-driven wheel speed to a threshold non-driven wheel speed value and a trans throttle value to a threshold throttle value to obtain a comparison result and selecting a wheel slip detection method based on a comparison result (Column 3 lines 10-32); wherein the step of reducing wheel torque comprises accessing a table of torque reduction values based on input pulley speed

and at least one of an acceleration error and a wheel speed difference (Column 6 lines 32-49); further comprising specifying a transmission speed ratio based on a current vehicle speed, and providing a line pressure in the transmission based on the specified speed ratio (Column 8 lines 45-59); further comprising determining a first torque reduction amount based on at least one of acceleration error and input pulley speed, determining a second torque reduction amount based on at least one of input pulley speed and speed difference between driven and non-driven wheels, and reducing wheel torque using a lesser of the reduction amounts (Column 8 lines 15-42).
